EDUCATION

Purdue University, United States (GPA 3.92)

May 2027

B.S. in Industrial Engineering, Minor in Business Economics, Certificate in Data Science

SKILLS

Technical Skills: Python (TensorFlow, PyTorch, Scikit-learn), SQL (MySQL, PostgreSQL), R, Tableau, Power BI

Machine Learning: Supervised/Unsupervised learning, Time-series modeling, Reinforcement learning, Deep Learning

Tools & AI: AWS, REST API deployment, BigQuery, LangChain, GPT, CNN, GAN/VAE, LSTM

PROFESSIONAL EXPERIENCE

Johnson & Johnson, Data Science Research Intern (Data Mine)

Aug 2025 - Dec 2025

- Built an **ML framework** using **Causal Forests** to identify high-responder patient segments, revealing a subgroup with a **25% higher drug success rate** for targeted product positioning.
- Accelerated data integration by 65%** by architecting an **Agentic AI** pipeline to autonomously harmonize 2,500+ clinical variables across 3 independent datasets.
- Isolated **15 high-impact predictive drivers** using **SHAP analysis** and feature engineering, increasing model interpretability for non-technical cross-functional stakeholders.
- Reduced research cycle time by 40%** by developing an automated cross-validation pipeline to verify findings across 3 independent cohorts, ensuring 90% reproducibility of model results.

Schneider Electric, Data Science Intern

Jun 2025 - Aug 2025

- Built an **end-to-end Python ML pipeline (K-means + XGBoost)** that identified satisfaction-critical customer patterns, enabling interventions that **improved predicted satisfaction by 15%**.
 - Applied **Causal Forests and Bayesian Networks** to isolate actionable operational levers, identifying 4 key supply chain metrics that directly cause delivery delays rather than just correlating with them.
 - Developed an **AI assistant in LangChain** for senior leadership that translates natural language queries into automated causal simulations, accelerating strategic *what-if* decision-making by **3 weeks**.
-

RESEARCH & PROJECTS

[Link to Portfolio](#)

EV Charging Intelligence Lab, Project Lead, SAS Curiosity Cup 2026 Finalist (Top 13/138 teams)

- Led **8-member team** on **LSTM pipeline forecasting CAISO SP15 electricity prices** 24 hours ahead in PyTorch, achieving MAE of \$10.99/MWh across 50,000+ test observations.
- Linked forecasts to EV station-level pricing decisions and **improved simulated profits by 20%** by combining LSTM price predictions with **capacity-constrained optimization**.

Power Outage Forecasting- IISE 2026 Analytics Competition

- Designed a 4-stage routing ensemble (**LightGBM classifier + Huber/log-log/MLP regressors + meta-learner**) to **predict 48-hr county-level outages** across 83 Michigan counties.
- Reduced normal-period **RMSE by 43%** using a LightGBM meta-learner trained on out-of-fold regressor disagreement signals across 336 horizon-specific models.

SpaceX Launch Success Prediction (IBM Data Science Professional Certificate)

- Constructed **end-to-end ML pipeline**—REST API ingestion, SQL EDA, Folium mapping, Plotly Dash dashboard—achieving **83.3% test accuracy** on first-stage rocket landing prediction.
- Improved landing-success predictability by 10% over baseline heuristics by engineering orbit/site features and tuning **Decision Tree, SVM, KNN, and Logistic Regression models**.

Bellabeat Smart Device Analysis (Google Data Analytics Certificate)

- Analyzed 33-user Fitbit dataset in **R, BigQuery SQL, and Tableau**, delivering 4 data-driven marketing recommendations for the Leaf product.
-

Activities and Interests: Music Production, Chess, Piano, Badminton, Cricket
